Experiment 11: Home Finder Real Estate Website

Aim

To create a property search page that filters listings by location and budget.

Algorithm

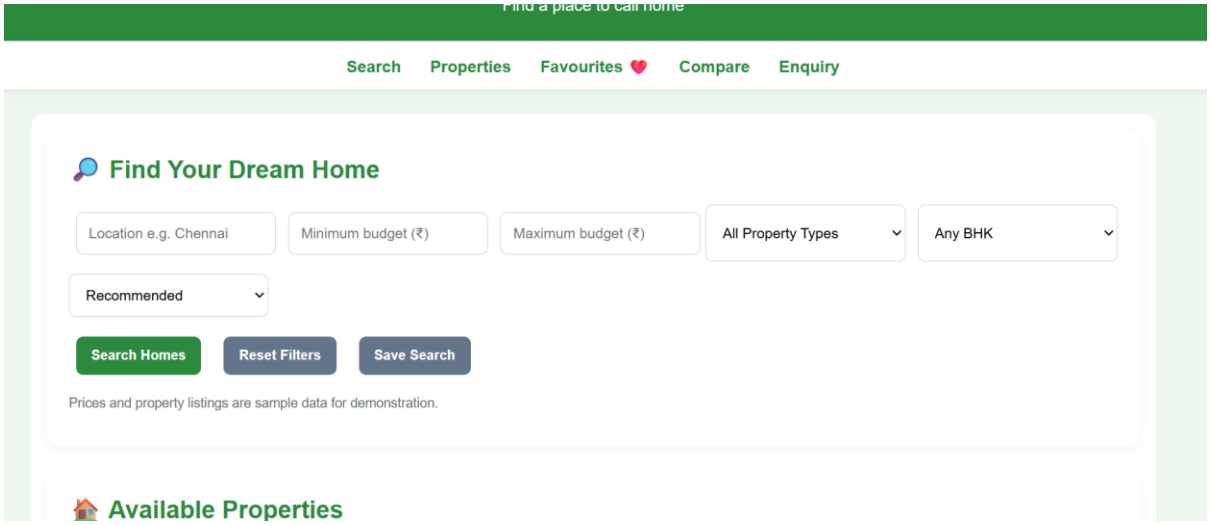

1. **Display sample property listings.**
2. **Enter a location and maximum budget.**
3. **Filter properties by the search criteria.**
4. **Display matching properties or a no-results message.**

Program Code

```
<!DOCTYPE html>
<html><head><title>Home Finder</title><style>body{font-family:Arial;background:#edf7ed;padding:25px}main{max-
width:700px;margin:auto;background:white;padding:22px;border-
radius:12px}input,button{padding:10px;margin:7px}button{background:#2b8a3e;color:white;border:0}.item{padding
:12px;border-bottom:1px solid #ddd}</style></head><body><main>
<h1>Home Finder</h1><input id="loc" placeholder="Location e.g. Chennai"><input id="budget" type="number"
placeholder="Maximum budget"><button onclick="search()">Search Homes</button><div id="list"></div>
<script>let homes=[{name:'2BHK Apartment',loc:'Chennai',price:4500000},{name:'Family
Villa',loc:'Bengaluru',price:8500000},{name:'Compact Flat',loc:'Chennai',price:2800000}];
function search(){let l=loc.value.toLowerCase(),b=Number(budget.value)||Infinity;let
r=homes.filter(h=>h.loc.toLowerCase().includes(l)&&h.price<=b);list.innerHTML=r.map(h=>`<div
class="item"><b>${h.name}</b><br>${h.loc} — ₹${h.price.toLocaleString('en-IN')}</div>`).join('')||'No
matching properties';}search();</script>
</main></body></html>
```

Result

The page filters example properties by location and maximum budget. Listings are sample data; maps, saved searches and agent contact need further integration.
