

Experiment 12: Online Insurance Management System

Aim

To design a basic insurance information page that lets users view sample policies and estimate annual premiums.

Algorithm

1. **Display example insurance policies.**
2. **Allow the user to choose a policy.**
3. **Read the coverage amount.**
4. **Calculate a simple illustrative premium estimate.**
5. **Display the estimate and disclaimer.**

Program Code

```
<!DOCTYPE html>
<html><head><title>InsureEasy</title><style>body{font-family:Arial;background:#edf2ff;padding:25px}main{max-width:650px;margin:auto;background:white;padding:22px;border-radius:12px}input,select,button{padding:10px;margin:7px}button{background:#4263eb;color:white;border:0}</style></head><body><main>
<h1>InsureEasy Policies</h1><select id="type"><option value=".02">Health (illustrative 2%)</option><option value=".03">Vehicle (illustrative 3%)</option><option value=".01">Home (illustrative 1%)</option></select><input id="cover" type="number" placeholder="Coverage amount ₹"><button onclick="calc()">Estimate Premium</button><h3 id="out"></h3><small>Educational demo only; not an actual insurance quote.</small>
<script>function calc(){let c=Number(cover.value),r=Number(type.value);out.textContent=c>0?'Illustrative annual premium: ₹'+(c*r).toLocaleString('en-IN'):'Enter a valid coverage amount.';}</script>
</main></body></html>
```

Result

The page calculates a sample premium estimate using a clearly illustrative rate. Real premiums, policy applications and claims require insurer data and secure services.
